

NEW POLICY

ELECTRICAL PLAN REVIEW

We have a **NEW POLICY** in place for Agricultural Building Electrical Review with Electrical Contractors before permits are issued, and approved.

Electrical contractor must have layout of barn or farm with material and devices to be used identified on drawing.

If shower rooms or entrance buildings are used, a separate permit will be issued, and only after a Soil Evaluation Permit has been approved by Anson County Environmental Health Department.

Wiring of generator and generator building would be included on permit for barns or farms.

The Soil Evaluation is \$150.00 for shower rooms. If no county water is available to barn or farm then a Well Permit for potable water would be \$250.00, there is no fee for a well on the farm for farm purposes.

Marvin Deese, Director of Inspections
